

# **“IPv6 Heartbreak”**

cvanfoss@he.net

The protocol is changing and you are changing, too  
I do not feel ready to make the needed move  
128 bits to my 32

Your addresses are unlimited, mine are finished soon

CHORUS:

**You are moving on, transitioning on time  
You're IPv6 now, leaving me behind**

**I'm still version 4, one protocol too late  
The v4 days are numbered and you'll forget my name**

End-to-end connections to keep your love alive  
But I've got NAT devices, it's eating me inside  
Security is built in, mobility is true  
You can scale forever, but my platform is a tomb

(CHORUS)

BRIDGE:

Your addresses are easy when you've got SLAAC  
Your routing table is growing, growing without me
